

Price List

	One	(5+1 Free)
Face:		
Full Face (Excl neck)	220	1100
Full Face (incl neck)	260	1300
Full Face (incl neck&decollate)	300	1500
Neck	100	500
Upper lip	70	350
Chin / Jawline / Cheeks	75	375
Chin & Jawline	110	550
Centre Brow	40	200
Arms:		
Hands & fingers	50	250
Shoulder	60	300
Under Arms	100	500
1/2 arm	150	750
3/4 arm	180	900
Full arms	200	1000
Front:		
Areola	80	400
Decollate	150	750
Full Breast	100	500
Stomach (centre line)	100	500
1/4 front	150	750
1/2 front	200	1000
3/4 front	300	1500
Full front	350	1750
Back:		
1/4 back	150	750
1/2 back	200	1000
3/4 back	300	1500
Full back	350	1750
Bikini:		
Regular (2cm either side, excl. top)	120	600
Extended (Incl. top, 2 cm either side)	150	750
Brazilian (excl. buttocks centre line)	175	875
Brazilian (Incl Buttocks centre line)	190	950
F/Bikini (Incl. centre buttocks)	200	1000
Section on Thigh	100	500
Legs:		
Feet & toes	50	250
Knees	50	250
Lower legs (excl. knees)	200	1000
Lower legs (Incl. knees)	250	1250
Thighs (excl. knees)	270	1350
Thighs (incl. knees)	300	1500
Full legs (not incl. feet/toes)	425	2125
Buttocks:		
Centre Line	60	300
Full Buttock	70	850

Hair Removal

Ellipse[®]

Shaving, waxing, tweezing and hair removal creams have been replaced by hair removal in a flash. Ellipse uses short, safe bursts of light emitted from a flash-lamp to remove unwanted hair from all body sites in minutes.

How does Ellipse treatment work?

The Ellipse operator guides the light from the flash-lamp to the treatment area. The unique Ellipse I2PL system carefully filters this light in two ways to ensure that only light with the correct characteristics (wavelengths) is allowed to reach your skin. Hair contains pigment (melanin) that absorbs the light and converts it into heat. The hair transmits this heat into the hair follicle, which is then destroyed and rendered unable to produce a new hair. To ensure optimal light transmission to the hair, a thin layer of gel (similar to that used in ultrasound examinations) is applied to your skin before treatment. The operator then moves the hand-held applicator over the entire treatment area exactly one applicator width after each flash of light.

Can all hairs be treated?

As the treatment relies on absorption of light in the hair pigment (melanin), the most efficient treatment is seen with dark hair. The lighter the skin, the more pronounced the distinction between hair and skin colour, making treatment easier. However, Ellipse has pre-programmed settings for different hair and skin colours to adjust the energy output to your needs.

Hair contains pigment (melanin) that absorbs the light and converts it into heat. The hair transmits this heat into the hair follicle, which is then destroyed and rendered unable to produce a new hair.

How long does an Ellipse treatment take?

The glass prism within the Ellipse applicator that guides the light to the skin is 10mm by 48mm, so a large number of hairs can be targeted in one flash of light. Treatment of the upper lip takes approximately 5 minutes, whereas a back or both legs take 60-120 minutes.

Does it hurt?

Tolerance of pain is very individual from person to person. No anaesthetics are required, and most people describe the sensation as similar to that of a rubber band snapping onto the skin. The light used is completely safe, visible light. Potentially harmful wavelengths are removed by the unique Ellipse Dual Mode Filtering system.

How many Ellipse treatments do I need?

Hair growth is cyclical, as hair follicles go through resting and growing phases. Only follicles in the growth phase contain hair and are destroyed by the heat. Resting hair follicles need to enter the growth phase before they can be effectively destroyed by the Ellipse treatment. That's why it is necessary to repeat the treatment at intervals until all hair follicles have been through the growth phase. The length and timing of the growth cycles are affected by numerous factors such as body site, hair density, thickness, ethnic origin, hormonal status and age. Clinical studies have confirmed that at least 3-6 treatments are needed, and the intervals between treatments are typically 1-3 months.

Ellipse hair removal on an armpit

Before

After three treatments

NOTE:

It is important not to remove hair by plucking, tweezing, waxing or use of creams during the entire four weeks before treatment. This ensures that as many hair follicles as possible contain a hair and thus can be destroyed by the light. Since tanning takes place by accumulation of pigment (melanin) in the skin, it is also important to avoid tanning (sun, solarium or self-tanning cream) before and during the treatment period. Otherwise your tanned skin will absorb more light, which makes treatment less effective.

How can I be sure Ellipse is safe & effective?

Clinical trials documenting Ellipse's safety and effectiveness are carried out by leading doctors prior to the release of the product. The results of these tests are then published in respected, refereed medical journals. You are welcome to view these scientific papers on the Ellipse website at www.ellipse.org. The settings used for your treatment will be based on the settings recommended by the clinicians who carried out the clinical trials.

Post Treatment Care

Generally, no post-treatment care is necessary. But people with very sensitive skin may benefit from using a soothing cream for a few days after treatment. It is also recommended to limit sun exposure and to use sunscreen for a few weeks following treatment.

Cellular Protection SPF 25 Suitable as a daily SPF cream

For ultimate protection in the sun, The Organic Pharmacy's Sun Cream is full of natural ingredients which protect, nourish and moisturise. Suitable for babies and the most sensitive skins.
